### **Product Data Sheet**

Edition 29/06/2016 Identification no: 02 03 02 02 003 0 000001 Sikadur®-32 Normal

# Sikadur®-32 Normal

# 2-part structural epoxy bonding agent

Product Description	Sikadur®-32 Normal is a moisture tolerant, structural, two part bonding agent, based on a combination of epoxy resins and special fillers, designed for use at temperatures between +10°C and +30°C.		
Uses	As a structural bonding agent and adhesive for:		
	Concrete elements (including bonding fresh to hardened concrete)		
	■ Hard natural stone		
	■ Ceramics, fibre-cement		
	■ Mortar, Bricks, Masonry		
	■ Steel, Iron, Aluminium		
	■ Wood		
	■ Polyester / fibreglass and Epoxy resin materials		
	■ Glass		
Characteristics / Advantages	Sikadur®-32 Normal has the following advantages:		
	■ Easy to mix and apply		
	Suitable for dry and damp concrete surfaces		
	Very good adhesion to most construction materials		
	■ High Bond Strength		
	■ Hardens without shrinkage		
	■ Different coloured components (for mixing control)		
	■ No primer needed		
	■ High initial and ultimate mechanical strength		
	Impermeable to liquids and water vapour		
	Good chemical resistance		

Tests					
Approval / Standards	Tested according to EN 1504-4.				
Product Data					
Form					
Colours	Part A: Part B: Parts A+B mixed:	white dark grey concrete grey			
Packaging	1 Itr (A+B) Pre-bato	ched kits.			
	0.7 Ltr unit part A 0.3 Ltr unit part B				
	5 ltr (A+B) Pre-batched kits.				
	3.4 Ltr unit <sub> </sub> 1.3 Ltr unit p				
Storage	6				
Storage Conditions / Shelf Life	24 months from date of production if stored properly in original unopened, sealed and undamaged packaging, in dry conditions at temperatures between +5°C and +30°C. Protect from direct sunshine.				
Technical Data					
Chemical Base	Epoxy resin.				
Density	1.4 <u>+</u> 0.1 kg/l at +23	1.4 <u>+</u> 0.1 kg/l at +23°C (part A+B mixed)			
Sag Flow	On vertical surfaces it is non-sag up to ~ 1 mm thickness. (According to EN 1799)				
Layer Thickness	~ 1 mm max.				
Change of Volume	Shrinkage: Hardens without sh	rinkage.			
Thermal Expansion Coefficient	Coefficient W: 8.2 x 10 <sup>-5</sup> per °C (T	emp. range +23°C - +60°C)	(According to EN 1770)		
Thermal Stability	Heat Deflection Ter HDT = +46°C (7 da		(According to ISO 75) (thickness 10 mm)

Sikadur®-32 Normal

System
Information

Information					
Application Details					
Consumption / Dosage	The consumption of Sikadur $^{\circ}$ -32 Normal is $\sim 0.9-1.0$ ltr/m $^2$ per mm of thickness				
Substrate Quality	Hardened mortar and concrete must be older than 28 days (dependening on any minimal strength requirements).				
	Verify the substrate strength by testing (concrete, masonry, natural stone).				
		The substrate surface (all types) must be clean, dry and free from contaminants such as dirt, oil, grease, existing surface treatments and coatings etc.			
	Steel substrates must be de-rusted to a condition similar to Sa 2.5.				
	The substrate must be so	The substrate must be sound and all loose or friable particles must be removed.			
Substrate Preparation	Concrete, mortar, stone and brick substrates.:  Concrete and other hardened mineral substrates must be prepared by suitab means such as high pressure water jetting and / or blastcleaning, in order to surfaces that are sound, clean, dry and free from any cement laitance, ice, si water, grease, oils, old coatings or other surface treatments. Any loose or friz particles must also be removed to achieve a contaminant free and open texts surface.				
	eaned and prepared thoroughly to the acceptable quality a 2.5 i.e. normally by blastcleaning and then removing any ew point conditions.				
Application Conditions / Limitations					
Substrate Temperature	+10°C min. / +30°C max.				
Ambient Temperature	+10°C min. / +30°C max.				
Material Temperature	Sikadur <sup>®</sup> -32 Normal must	be applied at temperatures between +10°C and +30°C			
Substrate Moisture Content	Can be applied to mat da the material well into the	mp concrete. In these situations apply by brush and work substrate.			
Dew Point	Beware of condensation a	and dew point conditions!			
	Substrate temperature du	ring application must be at least 3°C above dew point.			
Application Instructions					
Mixing	Part A : part B = 2 : 1 by v	weight or volume			
Mixing Time	Mi sp un un the ap at	re batched units: ix parts A+B together for at least 3 minutes with a mixing pindle attached to a slow speed electric drill (max. 300 rpm) atil the material becomes smooth in consistency and a hiform grey colour. Avoid aeration while mixing. Then, pour e whole mix into a clean container and stir again for approx. 1 more minute at low speed to keep air entrapment a minimum. Mix only that quantity which can be used thin its potlife.			
Application Method / Tools	Apply the mixed Sikadur®-32 Normal to the prepared surface by brush, roll or with a trowel, and ensure uniform and complete coverage. On hardened substrates mechanically prepared to receive fresh concrete, always apply and work the material well into the substrate.  Place the fresh concrete whilst the Sikadur®-32 Normal layer is still 'tacky'.				
	material becomes glossy and loses tackiness, apply a fresh coat with ad Sikadur <sup>®</sup> -32 Normal and proceed.				

4 Sikadur®-32 Normal

4/5

Cleaning of Tools		on equipment with Sika <sup>®</sup> Col material can only be mecha		
Pot-life	Pot-life (200 g) (According to EN ISO 9514			
	+10°C	+23°C	+30°C	
	~ 145 minutes	~ 55 minutes	~ 35 minutes	
	The pot-life begins when the resin and hardener are mixed. It is shorter at high temperatures and longer at low temperatures. The greater the quantity mixed, the shorter the pot-life. To obtain longer workability at high temperatures, the mixed Sikadur®-32 Normal may be divided into portions. Another method is to chill parts A+B before mixing them (not below +5°C).			
Notes on Application / Limitations	Sikadur® resins are formulated to have low creep under permanent loading. However due to the creep behaviour of all polymer materials under load, the long term structural design load must account for creep. Generally the long term structural design load must be lower than 20-25% of the failure load. Please consult a structural engineer for load calculations for your specific application.			
Value Base	All technical data stated in this Product Data Sheet are based on laboratory tests.  Actual measured data may vary due to circumstances beyond our control.			
Local Restrictions	Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.			
Health and Safety Information	For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.
