

# Elastic Wood Floor Installations in Hotels and Commercial Buildings Increased Possibilities for Architects

Innovation & Consistency | since 1910

# Sika Elastic Wood Floor Bonding Systems Incr

## Very Versatile Designs Are Possible

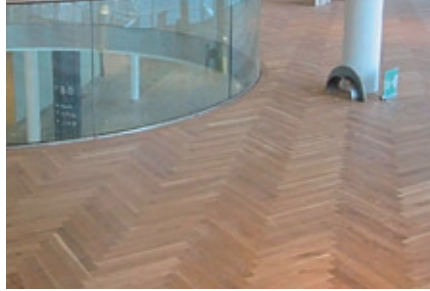

Wood floors in commercial buildings

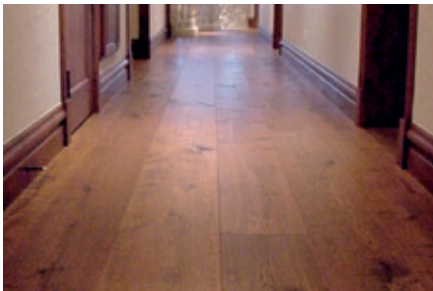

Exotic types of wood

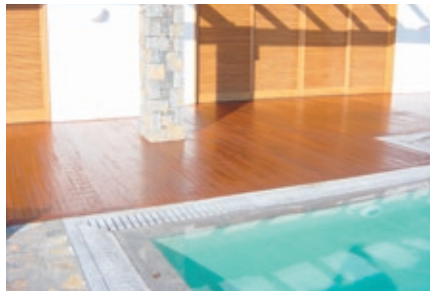

Custom design with Bamboo

Herringbone patterns

Wood flooring with large solid wood planks

Outdoor teak decking

With **SikaBond®** elastic wood floor adhesives everything is possible

- All types of wood species (beech to tropical woods)
- All types of wooden floors (parquet, engineered and solid woods)
- All types of installation patterns (parallel, herringbone, etc.)
- All types of areas (indoors, wet rooms and outdoors)

All of these types of wood floors are reliably and safely installed.

## Freedom of Design and Sika Modern Wood Floor

Wood floor finishes in hotels give a high quality image, they look clean and hygienic and suggest good value for money, all helping the owner to have more satisfied hotel guests and therefore also investors.

# Increase the Design Possibilities and Areas of Use

## Improved Comfort with Sika Elastic Wood Floor Bonding Systems

Elastic **SikaBonds**® adhesives together with the timeless design of a wooden floor prolongs the time between refurbishment periods and therefore increases value.

## Advantages with Sika Elastic Wood Floor Bonding Systems

### Improved Acoustics

Wood floors installed with the unique **Sika® AcouBond**® System can have their impact sound transmission reduced by -18db and they also have substantially reduced ambient sound.

Wood floors in bedrooms, health spa's and other quiet areas are therefore now frequently installed with the **Sika® AcouBond**® System. Globally over 3.5 million m² of wood floors have now been installed with the **Sika AcouBond**® System - improving acoustics, comfort and appearance considerably.

### Underfloor Heating

When wooden floors are installed using elastic **SikaBond**® adhesives there are no longer limitations in the use of wood floors over underfloor heating.

Sika has more than 15 years global experience installing wood floors with elastic **SikaBond**® adhesives over many different underfloor heating systems.

### Little Maintenance Necessary

The installation of wood floors with elastic **SikaBond**® adhesives ensures a seamless and durable floor. The high performance characteristics keep the maintenance costs at a minimum. Elastic **SikaBond**® adhesives also prolong the life expectancy of a wood floor.

### Faster Opening

Wood flooring is one of the last trades on site – and by this time the site can often already be behind schedule. The fast setting wood floor bonding systems and products from Sika will significantly reduce the construction time and the opening for business is sooner.

Subfloor treatment solutions are another of Sika's core competences.
