Sikafloor®-29N PurCem®
High strength polyurethane coving and detailing mortar

Product Description
Sikafloor®-29N PurCem® is a multi-component, vertical grade, coloured polyurethane modified, cement and aggregate mortar for detailing work and vertical rendering. It has a finely textured smooth aggregate appearance which offers excellent resistance to abrasion, chemical attack and mechanical damage. Typically installed at 3 - 9 mm thickness.

Uses
In combination with the rest of the PurCem® range in concrete substrate areas, to provide vertical, coving and detailing solutions in areas of abrasion and high chemical exposure, such as in:
- Food processing plants, in wet or dry process areas, freezers and coolers, thermal shock areas
- Chemical plants
- Laboratories
- Workshops
- Suitable for concrete protection providing physical resistance (Principle 5, method 5.1 of EN 1504-9)
- Suitable for concrete protection providing chemical resistance (Principle 6, method 6.1 of EN 1504-9)

Characteristics / Advantages
- Excellent chemical resistance. Resists a wide range of organic and inorganic acids, alkalis, amines, salts and solvents. Please refer to the Chemical Resistance Chart or consult your local Technical Dept.
- Designed specifically for trowel applications to vertical surfaces
- Similar coefficient of thermal expansion to concrete, allowing movement with the substrate through normal thermal cycling. It will perform and retain its physical characteristics through a wide temperature range from -40ºC (-40ºF) up to +140ºC (284ºF)
- Bond strength in excess of the tensile strength of concrete. Concrete will fail first
- Non taint, odourless
- VOC free
- High mechanical resistance.
- Can be applied on to 7 to 10 day old concrete after adequate preparation and with a tensile bond strength in excess of 1.5 MPa (218 psi)
- Sikafloor®- 29N PurCem® detailing mortar can withstand moisture vapor transmission values of 12 lbs/1000 ft2
- Seamless, no additional expansion joints are necessary; simply maintain and extend existing expansion joints up through the Sikafloor®-PurCem® flooring system
- Easy to maintain
- Wide range of application temperatures +10 ºC - +40 ºC
Environmental Information

Specific Characteristics

Specific Approval/Standards

Specific Ratings

EU Regulation 2004/42 VOC - Decopaint Directive

According to the EU-Directive 2004/42, the maximum allowed content of VOC (Product category IIA / J type wb) is 140 g/l (Limit 2010), for the ready to use product. Sikafloor®-29N PurCem, is VOC free for the ready to use product.

USGBC LEED® Rating

Conforms Section EQ (Indoor Environmental Quality), Credit 4.2 Low-Emitting Materials Paints and Coatings
Calculated VOC content ≤ 50 g / l

Tests

Approval / Standards

Polyurethane screed for concrete protection according to the requirements of EN 1504-2 for principles 5 (PR) and 6 (CR) as a Coating (C) and Conforms to the requirements of EN 13813: 2002, DoP 02 08 02 02 003 0 0 00001 1088, certified by Factory Production Control Body, 0086, certificate 541325, and provided with the CE-mark.

Concerning contact with foodstuffs, it conforms to the requirements of:
- Compliant with USDA flooring requirements
- Canadian Food Inspection Agency acceptance for use in food plants in Canada.
- British Standards Specifications (BSS) acceptance for use in the UK. Campden and Chorleywood Food Research Association, Ref. S/REP/125424/1a and 2a, dated 8th February, 2012

- Fire classification report according to EN 13501-1 from Exova Warrington Fire for Sikafloor®-31N PurCem® No.317050, dated 24th of March, 2012
- Liquid water transmission rate test report from the Technology Centre, Ref. 15456 dated January 25th, 2012
- Impact resistance values tested at PRA, Ref. n° 75221-151, dated January 11th, 2012

Product Data

Form

Appearance / Colours

Part A pre-tinted: coloured liquid
Part B: brown liquid
Part C: natural grey powder

Packaging

Part A+B+C: 10.2 litre (22.0 kg) ready to mix units
Part A: 1.60 kg plastic drum
Part B: 1.40 kg plastic jerry can
Part C: 19.00 kg plastic lined, double paper bags
**Storage**

**Storage Conditions / Shelf-Life**

If stored properly in original, unopened and undamaged sealed packaging, in dry conditions at temperatures between +10°C and +25°C.

- **Part A:** 12 months from date of production. **Protect from freezing**
- **Parts B:** 12 months from date of production. **Protect from freezing**
- **Part C:** 6 months from date of production. **Protect against humidity.**

---

**Technical Data**

**Chemical Base**

Polyurethane Cement

**Density**

- **Part A:** ~ 1.07 kg/l (at +20°C) (EN ISO 2811-1) & (ASTM C 905)
- **Part B:** ~ 1.24 kg/l (at +20°C)
- **Part C:** ~ 1.58 kg/l (at +20°C)
- **Part A+B+C mixed:** ~ 1.97 kg/l ± 0.03 (at +20°C)

**Layer Thickness**

3 mm min. / 9 mm max.

---

**Mechanical / Physical Properties**

**Capillary Absorption / Liquid water transmission rate**

Permeability to water: <0.016 kg /m² h°.5 (EN 1062-3)  
(Average of three values, system of Sikafloor®-29N PurCem® plus Sikafloor®-31 PurCem®)

**Thermal Expansion Coefficient**

α ≈ 2.44 x 10⁻⁵ per °C  (EN 1770)

(temperature range: -20°C to +40°C)

**Water Absorption**

0.18%  (ASTM C 413)

**Permeability**

To Water Vapour: 0.104 g/h/m² (4.3 mm)  (ASTM E-96)

**Fire Rating**

Class B(3) S1  (BS EN 13501-1)

**Service Temperature**

The product is suitable for use when exposed to continuous temperatures, wet or dry, of up to +140°C.  
The minimum service temperature is -40°C at 9 mm and -20°C at 3 mm.

- **Compressive Strength**
  - > 39 MPa after 28 days at +23°C / 50% r.h. (ASTM C 579)
  - > 44 N/mm² after 28 days at +23°C / 50% r.h. (BS EN 13892-2)

- **Flexural Strength**
  - > 8.1 MPa after 28 days at +23°C / 50% r.h.  (ASTM C 580)
  - > 8 N/mm² after 28 days at +23°C / 50% r.h.  (BS EN 13892-2)

- **Bond Strength**
  - > 2.0 N/mm² (failure in concrete)  
  (1.5 N/mm² is the minimum pull out strength of the recommended concrete substrate)  (EN 1542)

- **Bond Strength after Thermal Shock Resistance Test**
  - 2.84 ± 0.20 N/mm²  
  (tested as Sikafloor®-29N PurCem + Sikafloor®-31N PurCem)  (EN 1542)

- **Shore D Hardness**
  - 80 – 85  (ASTM D 2240)

- **Flexural Modulus**
  - 4050 MPa  (ASTM C 580)

- **Coefficient of Friction**
  - Steel: 0.7  
  - Rubber: 0.8  (ASTM D 1894-61T)

- **Slip Resistance**

  **Slip Resistance Values**  (EN 13036-4)

TRRL Pendulum, Rapra 4S Slider
### Abrasion Resistance

- **Class “Special”** Severe abrasion resistance (BS 8204 Part 2)
- **AR 0.5** (Less than 0.05 mm wear depth) (EN 13892-4)
- **Class A6** 6.0 cm³/50cm²
- **501 mg** (ASTM D 4060-01)
- Taber Abrader H-22 wheel / 1000 gr / 1000 cycles (tested in combination with Sikafloor®-31 PurCem®)

#### Indentation
- ≈ 0% (MIL - PFR 24613)

#### Impact Resistance

- **Class III** (≥ 20Nm) (EN ISO 6272-1)
- 2 pounds / 40 inches (3 mm thick) (tested in combination with Sikafloor®-31 PurCem®) (ASTM D 2794)

### Resistance

#### Chemical Resistance

Resistant to many chemicals. Please ask for a detailed chemical resistance table.

#### Thermal Resistance

Sikafloor®-29N PurCem® always needs to be sealed with Sikafloor®-31 PurCem® making the system build-up not able to withstand thermal shock caused by steam cleaning.

#### Resistance to Thermal Shock

- **Pass** (ASTM C 884)
- No cracks and/or delamination

#### Softening Point

- >180°C (356°F) (tested on Sikafloor®-20N PurCem®)
- (ASTM D-1525 ISO 306 Method B)

### System Information

#### System Structure

Use the products mentioned below as indicated in their respective Product Data Sheets. For additional information, please refer to the System Data Sheet and the Method Statement.

- **Substrate Priming Systems**
- **Coving and detailing and vertical applications:**
  - **Primer:** Sikafloor®-161 blinded with 0.4-0.7mm quartzsand
    - Reprime as Sikafloor®-29N PurCem® has to be applied vertically in tacky primer.
  - **Coving Mortar:** Sikafloor®-29N PurCem®
  - **Seal coat:** 1 x Sikafloor®-31N PurCem®

### Application Details

#### Consumption / Dosage

- **Primer:** Sikafloor®-161 as primer
  - Always apply on to tacky primer. Reprime if allowed to cure.
  - **Coving and detailing mortar 3 - 9 mm:** Sikafloor®-29N PurCem® (part A+B+C) ~ 2.0 kg/m² / mm layer thickness.
  - These figures are theoretical and do not allow for any additional material due to surface porosity, surface profile, variations in level or wastage etc.
Substrate Quality
The concrete substrate must be sound and of sufficient compressive strength (minimum 25 N/mm²) with a minimum pull off strength of 1.5 N/mm². The substrate must be clean, dry and free of all contaminants such as oil, grease, coatings and surface treatments, etc. If in doubt, apply a test area first.

Substrate Preparation
Refer to the Sikafloor®- PurCem® method statement

Application

Conditions / Limitations

Substrate Temperature
+10°C min. / +40°C max

Ambient Temperature
+10°C min. / +40°C max

Substrate Humidity
≤ 4% pbw – as required by the used Sikafloor® epoxy primer
Test method: Sika®-Tramex meter (equipment limited to < 6%), CM - measurement or Oven-dry-method.

Relative Air Humidity
85% max.

Dew Point
Beware of condensation!
The substrate and uncured floor must be at least 3°C above dew point to reduce the risk of condensation or blooming on the floor finish.

Application Instructions

Dew Point
Beware of condensation!
The substrate and uncured floor must be at least 3°C above dew point to reduce the risk of condensation or blooming on the floor finish.

Mixing
Part A : B : C = 1 : 0.875 : 11.8 (packaging size = 1.60 : 1.40 : 19.00) by weight

Mixing Time
Refer to the Sikafloor®- PurCem® method statement
Material and ambient temperature will affect the mixing process.
If necessary, condition the materials for best use to 15°C – 21°C
Premix part A with a low speed electric stirrer and then add part B and mix for 30 seconds. Make sure all pigment is uniformly distributed.
Use a double paddle (axis) mixer and gradually add part C (aggregate) to the mixed resin. DON'T DUMP!
Allow part C to blend for further 2 minutes minimum, to ensure complete mixing and a uniform moist mix is obtained. During the operations, scrape down the sides and bottom of the container with a flat or straight edge trowel at least once (parts A+B+C) to ensure complete mixing. Mix full units only.

Mixing Tools
Use a low speed electric stirrer (300-400 rpm) for mixing parts A and B.
For preparation of the mortar mix use a pan type revolving mixer.

Application Method / Tools
Prior to application, confirm substrate moisture content, r.h. and dew point.
If moisture content is > 6% pbw, Sikafloor®- 21 or 24 PurCem® or Sikagard®-720 EpoCem® can be applied as T.M.B. (temporary moisture barrier) system prior to priming with Sikafloor® -161 on vertical surfaces.

Primer coat.
Mix and apply the primer according to its corresponding Product Data Sheet, using a brush or roller to provide uniform coverage. The primer must be tacky during the application of Sikafloor®-29N PurCem®. Mix and apply only the amount of primer which can be overlaid before it cures. If the primer becomes glossy or loses tackiness, remove any surface contaminates, then recoat with additional material.

Mortar
Apply the mixed Sikafloor®-29N PurCem® onto the ready primed substrate and compact to the appropriate thickness, then finish the detailing profile with a coving trowel or steel float. Apply Sikafloor®-29N PurCem® while the primer is still tacky. If the primer becomes tack free, reapply the primer. A light brushing while the mortar is still workable will close any surface voids. Allow a minimum 10 hour cure period at 20°C. (See Waiting time / Overcoating)
For maximum sealing of the cove, application must be performed with one or two coats of Sikafloor®-31N PurCem® to seal the surface and improve aesthetics.
### Cleaning of Tools
Clean all tools and application equipment with Thinner C immediately after use. Hardened/cured Sikafloor®-29N PurCem® can only be mechanically removed.

### Potlife

<table>

</tr>
</tbody>
</table>

Times are approximate and will be affected by changing ambient and substrate conditions, particularly temperature and relative humidity.

### Notes on Application / Limitations

A retaining groove must be placed top or bottom of the cove detail to anchor the coving mortar as well as around details such as drains, etc., as indicated in the application details of the Method Statement for Application to prevent curling during curing. Width and depth must be twice the thickness of the mortar.

Do not apply to PCC (polymer modified cement mortars) that may expand due to moisture when sealed with an impervious resin.

Always ensure good ventilation when using Sikafloor®-29N PurCem® in a confined space, to prevent excessive ambient humidity.

Freshly applied Sikafloor®-29N PurCem®, must be protected from damp, condensation and direct water contact (rain) for at least 24 hours.

Do not apply to un-reinforced sand cement screeds, asphaltic or bituminous substrate, glazed tile or non-porous brick, tile and magnesite, copper, aluminium, soft wood or urethane composition, elastomeric membrane and fibre reinforced polyester (FRP) composites.

Protect the substrate during application from condensation from pipes or any overhead leaks.

Do not apply to cracked or unsound substrates.

Avoid puddles during primer application.

Always allow a minimum of 48 hours after product application prior to placing into service in proximity with food stuffs.

Products of the Sikafloor®-PurCem® product range are subject to discolouration when exposed to UV radiation. Extend depends on colour. There are no measurable losses of any properties when this occurs and it is a purely aesthetic matter. Products can be used outside provided the change in appearance is acceptable by the customer.

In some slow curing conditions, soiling of the surface may occur when opened to foot traffic, even though mechanical properties have been achieved. It is advised to remove dirt using a dry mop or cloth. Avoid scrubbing with water for the first three days.

Due to the technology used, colour stability of the products cannot be guaranteed when exposed to UV light.
