Sikafloor®-220 W Conductive
2-part, electrostatic conductive epoxy primer

Product Description
Sikafloor®-220 W Conductive is a two part, water dispersed, epoxy resin with a high electrostatic conductivity.

Uses
Sikafloor®-220 W Conductive must be applied as conductive primer underneath all Sikafloor® conductive wearing courses, such as Sikafloor®-262 AS N, 262 AS N Thixo, -235 ESD, -266 ECF CR, -269 ECF CR, -381 ECF and -390 ECF.
Electrostatic conductive coatings on concrete and cementitious screeds for different types of industrial use.

Characteristics / Advantages
- Highly electrostatic conductive
- Easy application
- Economical in use

Test
Approval / Standards
Water dispersed, epoxy roller coat with a high electrostatic conductivity according to EN 1504-2: 2004 and EN 13813, DoP 02 08 01 02 012 0 000001 2017, certified by Factory Production Control Body No. 0921, certificate 2017, and provided with the CE-mark.
Varnish ability test according to VW-standard PV 3.10.7 (paint wetting impairment substances (PWIS)) like silicones, HQM GmbH, Test Report 09-09-132-5, 09.2009

Product Data

Form
Appearance / Colours
- Resin - part A: black, liquid
- Hardener - part B: white, liquid

Packaging
- Part A: 4.98 kg containers
- Part B: 1.02 kg containers
- Part A+B: 6 kg unipacks

Storage
Storage Conditions / Shelf Life
12 months from date of production if stored properly in original, unopened and undamaged sealed packaging, in dry conditions at temperatures between +5°C and +30°C. Part A and part B must be protected from frost.
Technical Data

Chemical Base: Waterborne epoxy

Density
- Part A: 1.15 kg/l
- Part B: 1.06 kg/l
- Mixed Resin: 1.04 kg/l
  (DIN EN ISO 2811-1)
  All density values at +23°C.

Solid Content: ~ 34% (by volume) / ~ 44% (by weight)

Electrostatic Behaviour: Typical average resistance to ground: $R_g \leq 10^4 \Omega$
  (DIN EN 1081)
  * Readings may vary, depending on ambient conditions (i.e. temperature, humidity) and measurement equipment.

USGBC LEED Rating
- Sikafloor®-220 W Conductive conforms to the requirements of LEED
  - EQ Credit 4.2: Low-Emitting Materials: Paints & Coatings
  - SCAQMD Method 304-91 VOC Content < 100 g/l

System Information

System Structure
- Primer: 1 x Sikafloor®-161
- Earthing connection: Sika® Earthing Kit
- Conductive primer: 1 x Sikafloor®-220 W Conductive
- Conductive wearing course: 1 x Sikafloor®-262 AS N or AS N Thixo
  or 1 x Sikafloor®-235 ESD
  or 1 x Sikafloor®-266 ECF CR
  or 1 x Sikafloor®-269 ECF CR
  or 1 x Sikafloor®-381 ECF
  or 1 x Sikafloor®-390 ECF
- Conductive seal coat: 1 x Sikafloor®-230 ESD TopCoat (optional)
  Note: This system configuration as described must be fully complied with and may not be changed.

  (optional)

These figures are theoretical and does not allow for any additional material due to surface porosity, surface profile, variations in level and wastage etc.

Substrate Quality

The concrete substrate must be sound and of sufficient compressive strength (minimum 25 N/mm²) with a minimum pull off strength of 1.5 N/mm².

The substrate must be clean, dry and free of all contaminants such as dirt, oil, grease, coatings and surface treatments, etc.

If in doubt apply a test area first.
Substrate Preparation

Concrete substrates must be prepared mechanically using abrasive blast cleaning or scarifying equipment to remove cement laitance and achieve an open textured surface.

Weak concrete must be removed and surface defects such as blowholes and voids must be fully exposed.

Repairs to the substrate, filling of blowholes/voids and surface levelling must be carried out using appropriate products from the Sikafloor®®, SikaDur®® and SikaGard®® range of materials.

The concrete or screed substrate has to be primed or levelled in order to achieve an even surface.

High spots must be removed by e.g. grinding.

All dust, loose and friable material must be completely removed from all surfaces before application of the product, preferably by brush and/or vacuum.

Application Instructions

Mixing

Part A : part B = 83 : 17 (by weight)

Mixing Time

Prior to mixing, stir part A mechanically. When all of part B has been added to part A, mix continuously for 2 minutes until a uniform mix has been achieved.

To ensure thorough mixing pour materials into another container and mix again to achieve a consistent mix.

Over mixing must be avoided to minimize air entainment.

Mixing Tools

Sikafloor®-220 W Conductive must be thoroughly mixed using a low speed electric stirrer (300 - 400 rpm) or other suitable equipment.

Application Method / Tools

Uniformly spread 1 x Sikafloor®-220 W Conductive using a short pile nylon roller (12 mm).

Cleaning of Tools

Clean all tools and application equipment with water immediately after use. Hardened and/or cured material can only be removed mechanically.

Before applying Sikafloor®-220 W Conductive on Sikafloor®-161 allow:

Before applying Sikafloor®-235 ESD, 262 AS N, 262 AS N Thixo, 266 ECF CR, 269 ECF CR Sikafloor®-390 ECF or Sikafloor®-381 ECF on Sikafloor®-220 W Conductive allow:

<table>
<thead>
<tr>
<th>Substrate temperature</th>
<th>Minimum</th>
<th>Maximum</th>
</tr>
</thead>
<tbody>
<tr>
<td>+10°C</td>
<td>26 hours</td>
<td>7 days</td>
</tr>
<tr>
<td>+20°C</td>
<td>17 hours</td>
<td>5 days</td>
</tr>
<tr>
<td>+30°C</td>
<td>12 hours</td>
<td>4 days</td>
</tr>
</tbody>
</table>

Times are approximate and will be affected by changing ambient conditions particularly temperature and relative humidity.

Notes on Application / Limitations

This product may only be used by experienced professionals.

Do not apply Sikafloor®-220 W Conductive on substrates with rising moisture.

Apply Sikafloor®-220 W Conductive only on primed or levelled up concrete and screed surfaces.

Do not blind the primer.

Freshly applied Sikafloor®-220 W Conductive should be protected from damp, condensation and water for at least 24 hours.

Only start application of Sikafloor® conductive primer after the primer has dried tack-free all over. Otherwise there is a risk of wrinkling and impairing of the conductive properties.

After the curing of the Sikafloor®-220 W Conductive, testing to measure the conductivity is strongly recommended.

Before the application of a conductive flooring system, a reference area has to be applied. This reference area must be assessed and accepted from the contractor/client. The desired result and method of conductivity measurement must be stated in the Specification and Method Statement. The number of conductivity measurements is strongly recommended to be as shown in the table below:

<table>
<thead>
<tr>
<th>Ready applied area</th>
<th>Number of measurements</th>
</tr>
</thead>
<tbody>
<tr>
<td>&lt; 10 m²</td>
<td>6 measurements</td>
</tr>
<tr>
<td>&lt; 100 m²</td>
<td>10-20 measurements</td>
</tr>
<tr>
<td>&lt; 1000 m²</td>
<td>50 measurements</td>
</tr>
<tr>
<td>&lt; 5000 m²</td>
<td>100 measurements</td>
</tr>
</tbody>
</table>

In case of values lower/higher as required, additional measurements has to be carried out, approx. 30 cm around the point with insufficient readings. If the newly measured values are in accordance with the requirements, the total area is acceptable.

Placing of earthing points:
Please make sure to only use the original Sikafloor® Earthing Kit in order to connect the earthing points. Every earthing point is able to conduct approx. 300 m². Ensure the longest distance of each point in the area is max. 10 m to the next earthing point. For longer distances, additional earthing points have to be placed. If site conditions do not allow placing of additional earthing points, longer distances (>10 m) have to be bridged with the help of copper tapes. The earthing points have to be connected to the ring-mains, which has to be carried out and approved by an electrical engineer and in accordance with any relevant regulations or standards.

Numbers of earth connections:
Per room at least 2 earthing points. The optimum number of earth connections depends on the local conditions and should be specified using available drawings.
Recommended measuring equipment for the measuring of the resistance to earth ground: Insulation Tester Metriso 2000 from Warmbier or comparable.

If heating is required do not use gas, oil, paraffin or other fossil fuel heaters, these produce large quantities of both CO₂ and H₂O water vapour, which may adversely affect the finish. For heating use only electric powered warm air blower systems.

The incorrect assessment and treatment of cracks may lead to a reduced service life and reflective cracking - reducing or breaking conductivity.

### Value Base

All technical data stated in this Product Data Sheet are based on laboratory tests. Actual measured data may vary due to circumstances beyond our control.

### Local Restrictions

Please note that as a result of specific local regulations the performance of this product may vary from country to country. Please consult the local Product Data Sheet for the exact description of the application fields.

### Health and Safety Information

For information and advice on the safe handling, storage and disposal of chemical products, users shall refer to the most recent Material Safety Data Sheet containing physical, ecological, toxicological and other safety-related data.

### Legal Notes

The information, and, in particular, the recommendations relating to the application and end-use of Sika products, are given in good faith based on Sika’s current knowledge and experience of the products when properly stored, handled and applied under normal conditions in accordance with Sika’s recommendations. In practice, the differences in materials, substrates and actual site conditions are such that no warranty in respect of merchantability or of fitness for a particular purpose, nor any liability arising out of any legal relationship whatsoever, can be inferred either from this information, or from any written recommendations, or from any other advice offered. The user of the product must test the product’s suitability for the intended application and purpose. Sika reserves the right to change the properties of its products. The proprietary rights of third parties must be observed. All orders are accepted subject to our current terms of sale and delivery. Users must always refer to the most recent issue of the local Product Data Sheet for the product concerned, copies of which will be supplied on request.
