NEW, LOW CARBON FOOTPRINT Sika MonoTop® Range

**MORE PERFORMANCE
MORE SUSTAINABLE**

- Enhanced bonding properties
- Outstanding corrosion protection
- Increased chloride penetration resistance
- Reduced carbon footprint
- Meets LEED v4 requirements

New, Low Carbon Footprint, Sika MonoTop® Range More sustainable, more cost effective and **Better**

Sika is all about innovation. We pride ourselves by continuously developing new technologies to enhance our product range in the construction industry. This pro-active commitment to research and development has led to Sika introducing a new and improved range of concrete repair mortars. We are proud to announce, we have now made them more sustainable, more cost effective & Better.

OLD	NEW
Sika MonoTop®-620	Replaced with Sika MonoTop®-3020
Sika MonoTop®-610	Replaced with Sika MonoTop®-1010
Sika MonoTop®-615	Replaced with Sika MonoTop®-4012

One of our key pillars is Enhancing Customer Value and Reducing Environmental Impacts. The concept “more performance, more sustainable” leads our way towards product innovation. The latest example of research & development under this concept is the Sika MonoTop® low carbon footprint mortar range for durable, low dust concrete repairs:

Sika MonoTop®-1010

Sika MonoTop®-1010 is an improved rebar corrosion protection mortar. It is also a bonding primer, tested for application under live dynamic loads in conjunction with Sika MonoTop®-4012. A reduced carbon footprint of approximately 25%, compared to an equivalent mortar, makes it a first-choice amongst the best. It is a slurry that has reduced dust formation during mixing, comprises corrosion inhibitors, provides excellent resistance against water and chlorides, all enhancing the protection to the steel rebar. It's great adhesion to concrete and steel rebar, ultimately promotes the adhesion between an existing structure and any new concrete repair mortar.

Sika MonoTop®-3020

Sika MonoTop®-3020 is an improved, high-performing and sustainable smoothing and levelling fairing coat mortar for concrete repair and protection. Easy to work with - just add to water and it is ready to mix - it is suitable for both hand and wet spray application. With a 15% lower carbon footprint contributing to sustainability, it also provides reduced dust formation during mixing, a low cracking tendency and an enhanced mechanical performance.

Sika MonoTop®-4012

Sika MonoTop®-4012 is a cementitious, fibre reinforced concrete repair mortar. An innovative product that contains recycled waste material therefore reducing its carbon footprint. It is a versatile, quality product that can be used to repair all types of reinforced structures as well as structures that require a class R4 mortar. Sika MonoTop®-4012 is easy to apply by both hand and wet spray method and in most cases does not require a bonding primer. It has an A1 fire rating making it ideal for restoration work, structural strengthening and for preserving or restoring passivity.
